

NEREN BOD Meeting Talking Points

December 13, 2017

- The Board approved the following Paragon changes:
 - Remove old InnoVia legacy data from a field called Original Listing Agent, after first transferring that data into the Listing Agent field for listings that had a change of Listing Agent after it closed. This is necessary to remove inaccurate data that existed in the former MLS system so that the Paragon statistical reports will produce accurate information.
 - Rename the misnamed Co-Listing Agent field to “Alternate Contact.” This is necessary because the InnoVia memo field that was called Co-Listing Agent never actually provided statistical credit to the Co-Listing Agent, but was in fact only a memo field to identify an alternate agent who could answer questions about the listing.
 - Enable a true Co-Listing Agent field, that if used would split the statistical credit between the Listing Agent and the Co-Listing Agent.
 - Use of the Alternate Contact field and the new Co-Listing Agent field will be optional, neither must be used.
